Tasks Details

1. **MinAbsSum**

Hard

Given array of integers, find the lowest absolute sum of elements.

Task Score	Correctness	Performance
54%	100%	0%

Task description

For a given array A of N integers and a sequence S of N integers from the set {−1, 1}, we define val(A, S) as follows:

val(A, S) = |**sum**{ A[i]*S[i] for i = 0..N−1 }|

(Assume that the sum of zero elements equals zero.)

For a given array A, we are looking for such a sequence S that minimizes val(A,S).

Write a function:

```
def solution(A)
```

that, given an array A of N integers, computes the

Solution

Programming language used:	Python
Total time used:	11 minutes
Effective time used:	11 minutes
Notes:	*not defined yet*

Task timeline

minimum value of val(A,S) from all possible values of val(A,S) for all possible sequences S of N integers from the set {−1, 1}.

For example, given array:

```
A[0] =  1
A[1] =  5
A[2] =  2
A[3] = −2
```

your function should return 0, since for S = [−1, 1, −1, 1], val(A, S) = 0, which is the minimum possible value.

Write an **efficient** algorithm for the following assumptions:

- N is an integer within the range [0..20,000];
- each element of array A is an integer within the range [−100..100].
