Tasks Details

Task description

A non-empty array A consisting of N integers is given. Array A represents numbers on a tape.

Any integer P, such that 0 < P < N, splits this tape into two non-empty parts: A[0], A[1], ..., A[P - 1] and A[P], A[P + 1], ..., A[N - 1].

The difference between the two parts is the value of: |(A[0] + A[1] + A[1] + A[1] - A[1] + A[1] +

A[1] + ... + A[P - 1]) - (A[P] + A[P + 1] + ... + A[N - 1])|

In other words, it is the absolute difference between the sum of the first part and the sum of the second part.

For example, consider array A such that:

A[0] = 3

A[1] = 1

A[2] = 2

A[3] = 4

Solution

Programming language used: Python

Total time used: 1 minutes

Effective time used: 1 minutes

Notes: not defined yet

Task timeline

1 von 3 17.07.23, 11:44

$$A[4] = 3$$

We can split this tape in four places:

- P = 1, difference = |3 10| = 7
- P = 2, difference = |4 9| = 5
- P = 3, difference = |6 7| = 1
- P = 4, difference = |10 3| = 7

Write a function:

```
def solution(A)
```

that, given a non-empty array A of N integers, returns the minimal difference that can be achieved.

For example, given:

- A[0] = 3
- A[1] = 1
- A[2] = 2
- A[3] = 4
- A[4] = 3

the function should return 1, as explained above.

Write an efficient algorithm for the following assumptions:

- N is an integer within the range [2..100,000];
- each element of array A is an integer within the range [-1,000..1,000].

Code: 09:38:07 UTC, py,
                            show code in pop-up
final, score: 53
    # you can write to stdout for debugging p
2
    # print("this is a debug message")
3
 4
    def solution(A):
5
         # Implement your solution here
6
         # pass
         length\_array = len(A)
 7
         minimum = None
8
9
         for i in range(0, length_array - 1):
10
             difference = abs(sum(A[:i + 1]) -
11
             minimum = difference if minimum i
12
13
14
         return minimum
```

Analysis summary

The following issues have been detected: timeout errors.

Analysis

Detected time complexity: O(N * N)
